CHANNEL INVENTORY (IP) · SCREEN DESIGN · 1 / 3 · AMAZON, FILTERS APPLIED

Built from the existing `FilterBar`, `FilterItem`, `FilterMultiSelect` and `useStagedFilters`: changes stay in a draft until Apply filters. The table and cards load from a paginated API.

Inventory / Channel Inventory (IP)

# Channel Inventory (IP)

Stock each sales channel reports, per marketplace.

**Search** SKU, ASIN or product

**Channel** Amazon

**Marketplace** Amazon.com (US)

**Fulfillment** Any fulfillment

CHANNEL INVENTORY (IP) · SCREEN DESIGN · 2 / 3 · WALMART, FILTERS CHANGED BUT NOT APPLIED

Changing Channel resets Marketplace and Fulfillment to that channel's options. Changed boxes get the amber border, and the table keeps showing the last applied result until Apply filters.

Loading uses the existing `Spinner` row, and a failed request shows a red "Couldn't load channel inventory." row, as on Adjustments.

### Filters (existing components)

- **Search** ( `FilterItem wide` ): SKU, product name, and ASIN or FNSKU for Amazon. Applied with the other filters, not as you type.
- **Channel** (single select): Amazon, Walmart. Defaults to Amazon. Changing it resets Marketplace and Fulfillment in the draft.
- **Marketplace** ( `FilterMultiSelect` , empty = any): Amazon US, CA, MX · Walmart US, CA.
- **Fulfillment** ( `FilterMultiSelect` , empty = any): FBA · WFS, Seller fulfilled.
- **Reset / Apply filters** from `FilterBar` . State comes from `useStagedFilters` ; applying returns to page 1.

### API (paginated, server-side filtering)

- `GET /inventory/channel-stock?channel=&marketplaces=&fulfillment=&search=&page=&limit=20`
- Returns `{ data, page, limit, totalRecords, totalPages, summary, syncedAt }` , the same pagination format `PaginationFooter` uses elsewhere.
- `summary` (SKUs, available, inbound, out of stock) covers every filtered row, not only the current page, so the cards match the table.
- One reader per channel converts its own table ( `fba_inventory` , `walmart_inventory` ) into the same row format. Adding Shopify or Wayfair means adding one reader.
- The dropdown options come from the same endpoint's metadata ( `GET /inventory/channel-stock/options` ), so the screen and the backend use the same option lists.

### Table

- The same columns for every channel. A dash means the channel doesn't report that figure.
- Available shows in red when it's 0. Header stays fixed while the table scrolls, like Adjustments.
- Route `/dashboard/inventory/channel-inventory` , added to the sidebar and route permissions next to Adjustments.
